

SWISSCHARGER POWERTANK M

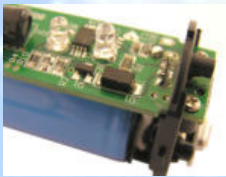

It's there again – the Power Inflation. The desire of the mobile community to always and everywhere make phone calls, listen to music, shoot digital pictures and now also even navigate has it's price:

- With the iPod by the pool, but after half a day the battery is down ?
- Cheapest mobile hour rates, but after 40 minutes the battery is dead ?
- Bicycle trip with navigation, but after 2 hours the display is dark ?

The new POWER TANK from SIStech - **SWISS**BATTERIES

These power supply problems belong to the past now. The new **POWER TANK** takes care of that. This mobile power socket is always ready to recharge weak or even empty batteries of mobile phones, iPod /MP3 Players, GPS Navigation devices, etc. The ultra light Lithium Polymer Battery has enough capacity to fully charge 2 mobile phones, for example.

State-of-the-art technology

The long-time experience of **SIS**tech on the field of power storage, power management and high performance electronics bears fruit. Of course absolute security and Outdoor Quality are obligatory. A novel "Smart Protection Chip" protects against overcharging, fully discharging and overload / short-circuit.

Ideal in shape and functionality

Only the latest components are utilized. This results to a weight of only 85gr. and dimensions of 27 x 35 x 96mm., in spite of the high capacity. The case is made of impact- and splash-proof plastics (Bayer MAKROLON).

Also a flashlight

If there is already more than enough power available, then it is only logical to integrate a flashlight with Power-LED.

Charging: The POWER TANK takes what it gets

Why complicate things when there is also an easy way? You can charge the **POWER TANK** whenever, wherever and by any means. Whether in the Sahara Desert or on a boat - any power "alimentation" is right. You've got the choice...

SOLARCARD

AC 100-250V

DC 11-30V

USB 5V

The AC, DC and USB Charger are included in delivery.
